## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "...wherein connecting pins and inserting holes, through which the connecting pins are inserted..." must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, and 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boucheron [5,581,130] in view of Nagaune [5,539,253].

Boucheron disclose an one system module for use in a vehicle [figure 10] comprising a case [120] constituting a body of the one system module; a power board [124] located inside the case and electrically connected with the power pins; and a signal board [123] located inside the case and electrically connected with the signal

Art Unit: 2841

pins, except for the power pins and signal pins are disposed adjacent to the edges on a surface of the case in a manner such that substantially a U-shaped arrangement is obtained.

Nagaune disclose a semiconductor device wherein the connecting pins [30, 31] are disposed adjacent to the edges on a surface of the case in a manner such that substantially a U-shaped arrangement is obtained [figure 2].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate Nagaune 's teachings with Boucheron's for the purpose of reducing the size of the module.

Regarding claim 3, Boucheron further disclose wherein connecting pins [119, figure 10] are electrically connect the power board and the signal board with each other.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Boucheron and Nagaune as applied to claim1 above, and further in view of Cooper et al. [5,375,040].

Boucheron and Nagaune disclose the one system module as claimed in claim 1 except for wherein at least two corner portions among four corner portions of the case, which two corner portions are opposite to each other in a diagonal direction, are defined with engaging holes, respectively, through which the case and a heat sink are coupled with each other.

Cooper discloses a case for a modular electronic circuit wherein at least two corner portions among four corner portions of the case, which two corner portions are opposite to each other in a diagonal direction, are defined with engaging holes (reference 14), respectively, through which the case and a heat sink (reference 70) are coupled with each other.

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Boucheron and Nagaune with Cooper's case for quicker dissipation of heat generated by the circuit boards.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.
